

Battery Garage Blocks - Reading Borough Council

The size of Reading Borough Council's garage replacement plan was a challenge Marshalls Sectional Buildings couldn't ignore after hearing

the news that another supplier had let them down. The high specification and flexibility of the Safeguard Battery Garage proved ideal in coping

with stepped bases on a sloping site with steps of 152 mm (6") and 227 mm (9") accommodated.

Ideally suited to community housing schemes, such as Reading's, Safeguard Battery Garages provide a high degree of vandal resistance.

A combination of heavy-duty, steel-reinforced concrete wall panels plus steel-framed, fully retractable, key-sprung, 4-point locking, plastisol coated steel doors and vandal resistant, high

tensile, box profile, mushroom coloured plastisol coated roofing, significantly reduces the risk of illegal entry.

Safeguard Battery Garages include robust concrete gutters with a factory-applied bitumen coating, doorposts with cast-in aluminium down pipe and galvanised reinforcing bars to eliminate the risk of corrosion.

As part of a plan to replace garages originally built in the 60s and 70s, over 100 Safeguard garages have been installed across several sites for Reading Borough Council. Providing a specification unrivalled by the competition, Safeguard battery garages are cost effective to buy and maintain, are fitted rapidly and come complete with a ten-year structural guarantee.

Howard Muir, of Marshall's Sectional Buildings commented, "We were delighted to supply Reading Borough Council with the quality product they desired. The flexibility and high specification of Safeguard proved to be a real advantage when building on existing bases."
